

Queued is a micro SaaS product that lets anyone — indie hackers, solo founders, small teams — create a beautiful waitlist landing page in under 60 seconds. No code, no design skills required. Pick a template, fill in your details, share your link, and start collecting signups immediately.

Queued

For users	Launch a waitlist page instantly without needing a developer or designer
For their visitors	A beautiful, credible page that encourages signups
Differentiator	4 distinctive templates, built-in email collection, simple dashboard

Version 1.0 · May 2025 · Confidential

Primary users are indie hackers, solo founders and small teams who need to validate an idea quickly. Secondary users could be agencies or larger companies launching new products —

WHAT'S INSIDE

- 4 waitlist page templates — Oat, Slate, Ember, Void
- Full landing page design with interactive template showcase
- Live page builder with real-time preview
- User dashboard with overview, subscribers and settings
- Pricing model — Free, Pro (\$9/mo), Enterprise
- Tech stack — Next.js, Supabase, Vercel, Stripe, Resend

BUSINESS MODEL

Pricing

Queued uses a simple monthly subscription model. Charging per waitlist was rejected as it creates friction at exactly the wrong moment — when a user wants to launch. Flat monthly is predictable and friendly.

	Pro	
\$0 / forever	\$9 / month	Custom pricing
1 waitlist	Unlimited waitlists	Unlimited waitlists
100 signups	Unlimited signups	Unlimited signups
Queued subdomain	Custom domain	Custom domain + SSO
All 4 templates	All 4 templates	All 4 templates
Queued badge	Remove badge	Remove badge
—	Email export (CSV)	Email export + SLA

Key insight: The 100 signup free limit hits exactly when things are exciting — the launch is working and the user needs to upgrade at the best possible moment.

ENGINEERING

Tech stack

The stack is intentionally simple and boring. The goal is to ship fast and scale when needed, not to over-engineer. All tools chosen have generous free tiers to allow a \$0 launch cost.

Layer	Tool	Why
Frontend + API	Next.js	Full-stack, great DX, API routes built in
Database	Supabase (free tier)	500MB storage, 50k MAU free — more than
Hosting	Vercel	Auto-scales, GitHub Education benefit availa
Payments	Stripe	Industry standard, free until revenue comes
Email delivery	Resend	3,000 emails/month free, great developer ex
Domain	Namecheap	Free 1-year domain via GitHub Education pr

Total estimated monthly cost at launch: \$0. Revenue before costs.

WAITLIST PAGE TEMPLATES

The 4 templates

Each template has a distinct personality — not just a color swap. They differ in layout, typography, spacing and feel. All 4 are available on the free plan. Templates are not infinitely customizable to keep Queued focused — it is a waitlist tool, not a website builder.

Oat

For the calm and considered

Warm minimal

Slate

For the professional builder

Cool neutral

Ember

For the ones who launch loud

Dark warm

Void

For the bold and serious

Monochrome

Common page structure

All 4 templates share the same section structure. Highlights and FAQ are optional toggles. Hero is always visible.

Section	Required	Description
Hero	Always	Logo, product name, tagline, email form, signup count
Highlights	Optional	Up to 3 feature rows — icon, title, description
FAQ	Optional	Up to 5 accordion Q&A items
Footer	Always	"Built with Queued" badge (removable on Pro)

MARKETING SITE

Main landing page

The Queued landing page has its own distinct identity — clean modern white, typography-forward, sitting above all 4 templates without competing with any of them. Primary goal: show the templates and wow visitors visually.

Section structure

#	Section	Purpose	Key elements
1	Navbar	Navigation + CTA	Logo, Templates, Pricing links, Get started button
2	Hero	First impression	Big 64px headline with amber accent, one CTA button, no
3	Full bleed	Scroll stopper	Dark Ember-style section — "Your page. Your vibe." cinem
4	Template showcase	Product wow	4 named cards, hover reveals preview button, click opens l
5	How it works	Simplicity sell	3 steps — Create, Share, Watch signups grow
6	Pricing	Conversion	Free vs Pro cards, clean feature lists
7	Footer	Closure	Black footer, nav links, copyright

Template showcase interaction design

The template cards are the centrepiece of the landing page. The interaction was carefully considered:

- Card default state: scaled-down hero section preview anchored to top, showing template name and mood tag
- Hover state: background shifts to the template's own color (Oat → cream, Ember → dark brown, Void → black) and a "Preview" button slides up from the bottom
- Click: opens a full scrollable modal showing the complete template with all sections rendered
- Modal: has template name, mood tagline in header, and an X close button

PRODUCT CORE

Page builder

The page builder is the heart of the product. The approach chosen is a guided form-driven editor with a live preview — simpler to build than a click-on-the-DOM editor but more satisfying than a multi-step wizard with no feedback.

Layout

Top bar Logo · Waitlist name · Subdomain link · Preview button · Publish button

Left panel (300px) — Structured input sections Right panel — Live preview inside a fake browser frame

Left panel sections

Section	Fields / Controls
Template	4 swatches — Oat, Slate, Ember, Void. Click to switch. Preview updates in
General	Product name (text input) · Tagline (textarea) · Button text · Coming soon p
Highlights	Toggle on/off · Up to 3 features · Each: title + description · Add / Remove b
FAQ	Toggle on/off · Up to 5 Q&A items · Each: question + answer textarea · Ad
Settings	Subdomain input (.queued.io) · Show signup count toggle · Rotating placeh

Design decisions

- No click-on-DOM editing — kept as a v2 feature to avoid Carrd-territory complexity
- Center alignment fixed for MVP — alignment options deferred to v2
- Hero section always visible — cannot be toggled off
- Preview updates in real time as user types — no save/refresh needed
- Template switch updates all colors, fonts and layout instantly in the preview

USER INTERFACE

Dashboard

The dashboard is where users return to daily after launching. The design philosophy is deliberate simplicity — tell the user what they need to know in under 5 seconds. No analytics deep dives, no complex settings, no clutter.

Layout structure

Minimal left sidebar (220px) + main content area. Sidebar has: Dashboard, Waitlists, Settings, Help navigation items. User avatar and plan indicator at the bottom.

Main dashboard view

- Personalised greeting — "Good morning, [name]"
- Free plan nudge — subtle amber banner with upgrade CTA
- 3 stat cards — Total signups, This week, Waitlists count
- Waitlist cards — name, template, subdomain, total signups, today's signups, quick action buttons (edit, copy link, view live)
- "New waitlist" button — always visible top right

Individual waitlist view — 3 tabs

Tab	Contents
Overview	Total signups · This week · This month · Bar chart of signups over time (last 8
Subscribers	Total count · Search bar · Export CSV button · Table: email, signup date, posi
Settings	Subdomain input · Custom domain (Pro locked) · Save button · Danger zone -

DESIGN SYSTEM

Colors, typography & decisions

Design philosophy

The overarching direction across the whole product is warm, considered and gradient-free. Gradient fatigue is real — Queued deliberately avoids gradients, glassmorphism and neon effects throughout. Clean flat surfaces, warm tones, generous whitespace.

Template color palettes

Template	Background	Text	Button	Accent	Feel
Oat	#FAF7F2	#2C2C2A	#2C2C2A	#D85A30	Warm cream, editorial
Slate	#F4F4F2	#1a1a1a	#185FA5	#185FA5	Cool grey, professional
Ember	#1C1917	#FAF7F2	#EF9F27	#EF9F27	Dark brown, premium
Void	#ffffff	#000000	#000000	#000000	Pure mono, brutalist

Key design decisions

No gradients anywhere — Gradient fatigue is real. All surfaces are flat solid colors.

Template names not labels — "Oat, Slate, Ember, Void" vs "Minimal, Professional, Dark, Brutalist" — names give personality and make choosing feel fun.

Void uses monospace throughout — Font is monospace in Void for everything — not just code. Reinforces the brutalist identity.

Landing page is its own identity — Clean white, sits above all 4 templates without matching any of them.

Full bleed dark section on landing — The Ember-style cinematic section between hero and showcase stops the scroll and creates a wow moment.

No browser mockup in hero — Removed in v2 — was underwhelming. Let the headline breathe instead.

Center alignment fixed for MVP — Alignment options deferred — they cascade into edge cases and push toward website builder territory.

ROADMAP

MVP scope & what comes next

MVP — Ship this first

- Landing page — full design complete, ready to build
- 4 waitlist templates — Oat, Slate, Ember, Void
- Page builder — form-driven with live preview
- User dashboard — main view + individual waitlist (overview, subscribers, settings tabs)
- Auth — signup and login (to be designed)
- Onboarding — first-time user experience (to be designed)
- Payments — Stripe integration, Free and Pro plans
- Email confirmation via Resend when someone joins a waitlist
- Subdomain routing — [name].queued.io
- Email export — CSV download (Pro only)

V2 — After first users

- Custom domain connection on Pro plan
- Hero alignment options (left / center / right)
- Annual pricing (cheaper monthly, better cash flow)
- Referral mechanic — "refer friends to unlock early access discount" (reward-based not rank-based)
- Live preview editor — click-on-DOM editing
- More template options
- "Built with Queued" showcase page

V3 — If it takes off

- Enterprise / Team tier — custom pricing, SSO, SLA, invoicing
- API access for developers
- Integrations — Zapier, webhooks
- Analytics — traffic source, conversion rate

- Team collaboration features

Distribution strategy

Launch MVP on Reddit (r/SideProject, r/IndieHackers, r/startups). Get real feedback from real users before building more features. The "Built with Queued" badge on every free page is the main organic growth channel — every waitlist page is a small ad for Queued.

QUICK REFERENCE

Everything at a glance

Item	Decision
Product name	Queued
Tagline	"Your waitlist, live in 60 seconds"
Templates	Oat (warm), Slate (professional), Ember (dark), Void (brutalist)
Free plan	1 waitlist, 100 signups, Queued subdomain, badge, all templates
Pro plan	\$9/mo — unlimited waitlists, unlimited signups, custom domain, no badge
Enterprise	Contact us — custom pricing, SLA, SSO, invoicing
Frontend	Next.js
Database	Supabase (free tier)
Hosting	Vercel
Payments	Stripe
Email	Resend
Domain	queued.io (Namecheap via GitHub Education)
Subdomain format	[name].queued.io
Template sections	Hero (required) + Highlights (optional) + FAQ (optional) + Footer
Max features	3 per waitlist
Max FAQ items	5 per waitlist
Builder approach	Form inputs left + live preview right, no click-on-DOM
Dashboard nav	Sidebar: Dashboard, Waitlists, Settings, Help
Waitlist tabs	Overview, Subscribers, Settings
Launch channel	Reddit — r/SideProject, r/IndieHackers

Ready to build.

`npx create-next-app@latest queued`

You have the idea. You have the name. You have the design. Now ship it.
